How to run the code?

Please open the attached .py/ipynb in Google Colaboratory. You need a google account to run the code in Google Colaboratory.

Open https://colab.research.google.com on a browser. Click on upload and upload the file.

The necessary Python packages are already imported in the code block.

Please run each block of algorithm to look at the outputs.

To connect/mount your google drive to the google Colab use the code block that's in the code file. After that a new window will pop up. Select your email and click connect.

The .txt data file must be in your drive to use the data. You can provide the path of the seed data file to the path variable.
